### EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Todd Deveau on 7/19/09.

The application has been amended as follows:

- **Claim 7** (Amended): A method for performing parallel chemical experiments, wherein use is made of a system comprising:
  - an assembly for performing parallel chemical experiments, said assembly comprising:
    - a main body having a first and a second face on opposite sides thereof, multiple bores extending through said main body between said first and second face,
    - tubular liners having openings at opposite ends thereof, each liner removably fitting in a bore in the main body, the liners are each provided at the first face of the main body with at least one outwardly directed support projection, and the bores in the main body are provided with a corresponding recess for receiving the support projection, and
    - first closure means for closing the openings of the liners at the first face of the main body, which first closure means comprise one or more elastic first sealing members and a first cover plate, so that said first sealing members are interpositioned between the ends of the liners and the first cover plate,
    - second closure means for closing the openings of the liners at the second

Art Unit: 1797

face of

the main body, and said second closure means comprising one or more second elastic sealing members and a second cover plate which is fastenable to the main body, so that said second sealing members are interpositioned between the ends of the tubular liners and the second cover plate.

-said first and second closure means being fastenable to said main body, so that an

experimentation chamber is defined within each liner, and

- a filtration device having channels with inlets corresponding to the bores in the main body of the experimentation assembly and a filter in each channel, which method comprises the steps of:

-removing of the top cover plate of the experimentation assembly when in horizontal

position and of the associated at least one sealing member,

-bringing said filtration device against the top face of the main body, and

-subsequently reversing said system such that the contents of the experimentation

chambers enters said channels in the filtration device and is filtered.

- In line 1 of **claim 14**, delete [Use of an assembly according to claim 1 for] insert –A method according to claim 7, wherein the parallel chemical experiments include—
- In line 1 of **claim 15**, delete [Use of an assembly] insert –A method—
- In line 1 of **claim 16**, delete [Use of an assembly] insert –A method--
- **Claim 43** (Amended): An assembly for performing parallel chemical experiments, said assembly comprising:

Art Unit: 1797

- a main body having a first and a second face on opposite sides thereof, multiple bores extending through said main body between said first and second face,
- liners each having an opening at the first face of the main body, each liner removably fitting in a bore in the main body, the liners are each provided at the first face of the main body with at least one outwardly directed support projection, and the bores in the main body are provided with a corresponding recess for receiving the support projection, and
- first closure means for closing the openings of the liners at the first face of the main body, which first closure means comprise one or more elastic first sealing members and a first cover plate, so that said first sealing members are interpositioned between the ends of the liners and the first cover plate,
- said first closure plate being fastenable to said main body, so that a closed experimentation chamber is defined within each liner,
- wherein the liners are tubular liners, each liner also having openings at opposite ends thereof, and wherein second closure means are provided for closing the openings of the liners at the second face of the main body, said second closure means comprising one or more second elastic sealing members and a second cover plate which is fastenable to the main body, so that said second sealing members are interpositioned between the ends of the tubular liners and the second cover plate, and
- a filtration device, separate from the main body, said filtration device comprising a plate having multiple channels, with inlets

corresponding to the bores in the main body of the experimentation assembly and a filter in each channel.

- **Claims 13 and 44** are canceled.

2. **Claims 1-9, 14-16 and 39-45** are allowed.

3. The following is an examiner's statement of reasons for allowance:

Antonenko et al. (US 5866342) has been determined to be the closest prior art of record. As to independent claims 1, 7 and 43, Antonenko fails to teach or suggest the structure of at least one outwardly directed support projection that are received by bores in the main body of an assembly as disclosed in claims 1, 7 and 43.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
